## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 5, 6, 7, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Auf der Mauer.

Auf der Mauer teaches a device for transferring at least two sheets, which are arranged in a shingled mode of arrangement in a sheet transport direction, to a sheet handling machine which comprises a first transport unit, 14, which moves the at least two sheets at a first transport speed after the transfer. The two sheets are spaced apart by a certain length of displacement, meaning that they are shingled. The device comprises a feed belt, 28, which performs the same function as a feed roll, and feeds at least two sheets in a shingled mode of arrangement to the sheet handling machine at a second speed, which is higher than the first speed; and a brake roll, 52', which decelerates the second sheet to a third speed as soon as the first sheet is decelerated by the transport unit, the third speed being lower than the second speed, thereby maintaining the shingled mode of arrangement. He further teaches that the brake roll, 52', serves to decrease the speed of the sheet so that the third speed is equal to the first speed, see figure 4-11 and column 8, line 10+ and column 12, lines 55+.

Art Unit: 3653

While Auf der Mauer does not specifically disclose a method, it would have been obvious to perform the method steps of claim 1, 5, and 6 when using the apparatus taught by Auf der Mauer, and as described above, in its usual and expected fashion.

Regarding claim 5, Auf der Mauer discloses the claimed invention except for the optimum speeds specified for the first, second, and third, speeds. It would have been obvious to one of ordinary skill in the art at the time the invention was made to determine the optimum operating speed of the sheet-handling machine transport belts, , since it has been held that discovering an optimum value of a result effective variable involved only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

#### ***Allowable Subject Matter***

Claims 2-4 and 8-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
